Powercraft
Cockpit Canopy

The available cockpit space on board a motor or power craft can be utilised to its full potential with the addition of a Cockpit Canopy. Not only will the canopy extend the living and usable area, it will provide protection for you, your crew and the cockpit area from bad weather conditions.

The extra space gained by adding the canopy can now be maximized in other ways. For example, it will provide extra accommodation, space to hang your wet weather clothing or even a room in which to socialize with your family or friends.

The Cockpit Canopy is designed to attach to a flybridge or wheelhouse using quality fastenings. The cover then extends aft, supported by framework where necessary, down to the rear of your cockpit. Incorporated in the C&J design are zipped panels which can be used not only for access, but can be easily opened and rolled up should airflow be required in the cockpit.

The Cockpit Canopy is manufactured using a UV stable and shower resistant acrylic canvas. This acrylic canvas is available in a wide range of colours and should therefore make your choice to match existing canvas work, or co-ordinate with your craft's colour scheme, an easy one!

The design and the manufacturing process of the C&J Cockpit Canopy are constantly being updated and the materials and equipment used are of the best quality available. These materials, in conjunction with our manufacturing techniques enable us to provide a product of a consistently high quality.

Further details of the design and specification of our Cockpit Canopy are provided overleaf along with optional extras that are available with this product.

Powercraft Cockpit Canopy (cont)

As standard specification our marine grade stainless steel frames are split and jointed, using spring loaded pins, once in the top centre of each bar. If confined storage is required extra splits and joints, just below the radius corners can be offered as an optional extra. We also provide an innovative colour coding system that assists with the storing and, when required, erecting of the framework, therefore making handling easier. The acrylic canvas cover is attached to each bar of the framework by means of a heavy duty nylon zip incorporated in to a canvas pocket.

As an optional extra a frame storage bag enables the frame to be kept together, protected and easily found when placed in to a locker. An acrylic canvas storage bag for the cover itself is also available and comes complete with strong webbing handles. These bags will keep your cockpit canopy cover and frame protected and compact when stored away. The bags will also protect other equipment within the locker.

For flybridge style cruisers, an optional integral storage pouch is available. This pouch is added to the top of panels adjacent to the flybridge. The window panels can then be rolled up and simply zipped into the pouch.

If more light and/or vision are required in the cockpit, extra windows incorporated into the cockpit canopy are available as a further option. Window blinds can also be added to the interior of the windows providing more privacy.

Furthermore, exterior covers will provide protection to the windows from UV light and other abrasives. These are also available for a further minor cost.

The C&J Cockpit Canopy is supplied complete with all necessary fastenings, step-by-step installation guide and a 12 month warranty against defective workmanship and/or materials.
