Wheel & Pedestal Covers

The wheel pedestal or binnacle onboard a yacht is an ideal area to locate instrumentation. The instruments will be clearly visible when you are at the helm, just where you need them. But when you are not using your beloved yacht, this technical and expensive equipment can be left open to the elements with a potential for damage from the weather. The life span of your electronic instruments could be reduced quite significantly when continually exposed to harmful UV light and rain.

Protecting your investment makes sense. A cover made from UV stable and water resistant acrylic canvas will do just that. If you have a leather cover on your wheel, our Wheel and Pedestal Cover will look after the leathering as well as protecting your instruments. You may also have a folding cockpit table made from teak, that stores in front of the pedestal. No problem, our Wheel and Pedestal Cover could be tailored to protect this as well.

Although, at first glance the Wheel and Pedestal Cover appears to be an uncomplicated design, it can be quite an awkward product to manufacture due to so many different angles, shapes and curves that are involved. Installing the cover is relatively simple. We sew in a full height nylon zip that allows the cover to be installed over the top of the Wheel and Pedestal. Doing the 'zip up' tensions the canvas neatly around the wheel and pedestal. Other fixings or fasteners are generally not needed to tension the cover.

Although our template library of standard design Wheel and Pedestal Covers is growing, some of these items are classed as custom-built due to the complexity of the design and location of your vessel. However, simpler Wheel Covers, designed to protect the rim, are available at a shorter delivery time. A self measurement form and measuring guide is available on our website, or alternatively from our office.

As with all manufactured products the **C&J Wheel and Pedestal Covers** are guaranteed for 12 months against defective workmanship and/or materials.
